EXPERIMENT 11.1.1

ALGORITHM:

1. Start the program
2. Take an integer input from the user
3. Set a variable sum_digits = 0
4. Repeat while the number is greater than 0:
5. Extract the last digit of the number
6. Add it to sum_digits
7. Remove the last digit from the number
8. After the loop ends, print the sum of digits
9. Stop the program

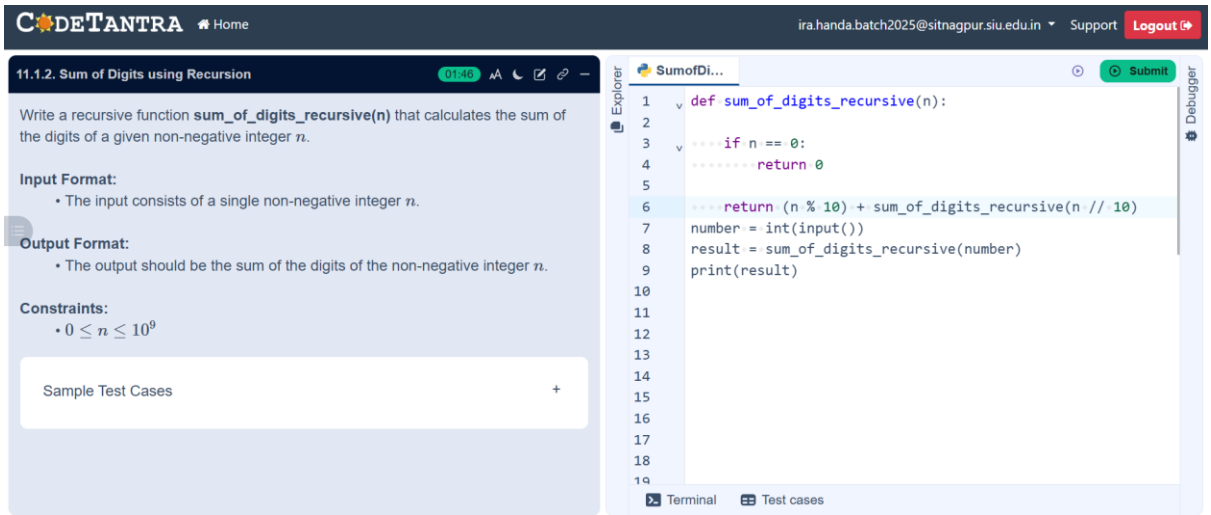
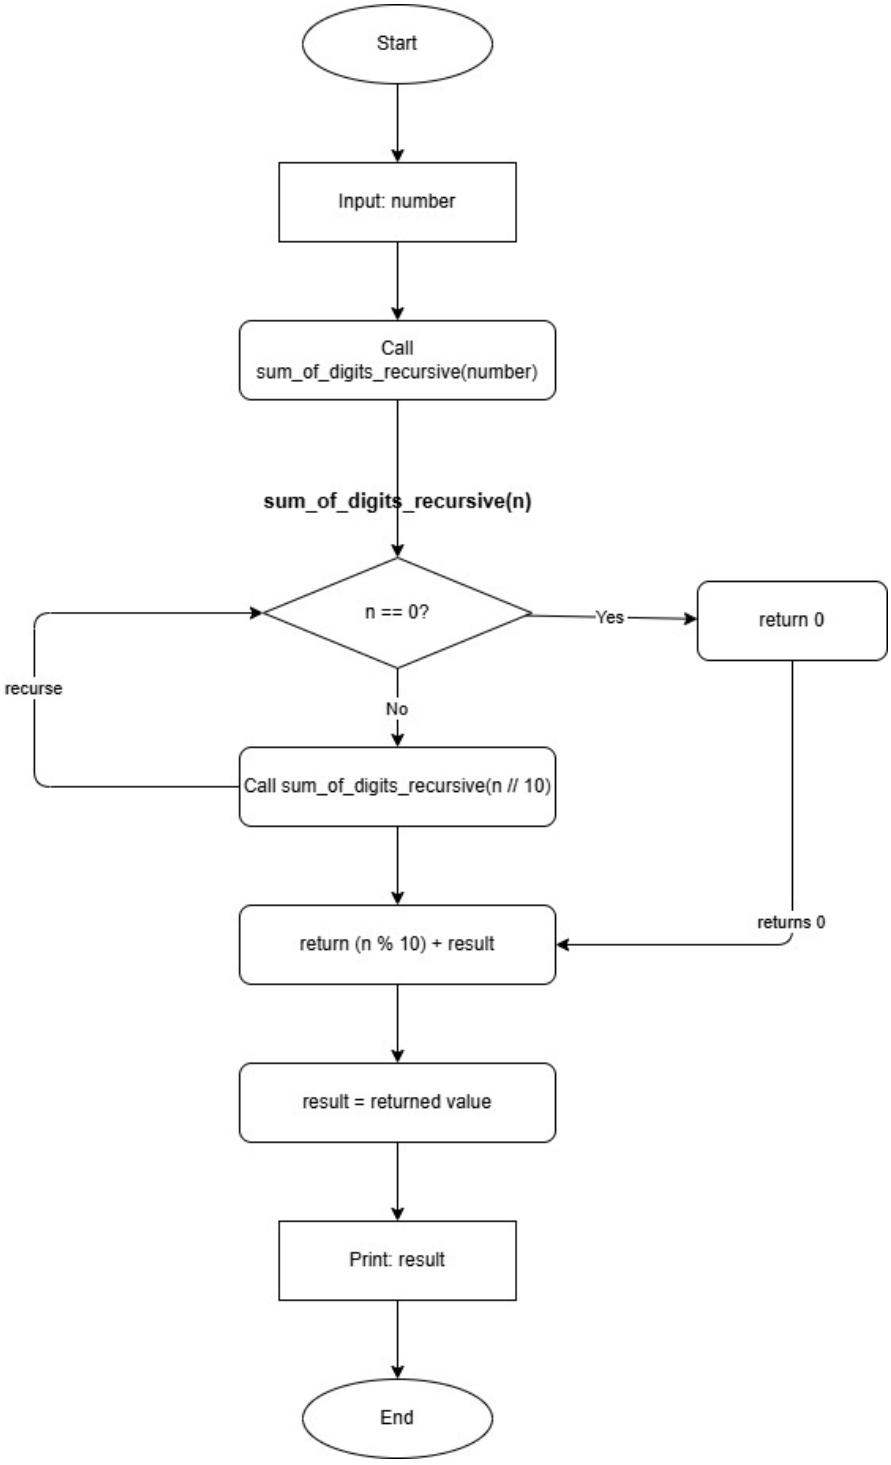
EXPERIMENT 11.2.1

CODETANTRA:



FLOWCHART:



ALGORITHM:

1. Start the program
2. Define a function sum_of_digits_recursive(n)
3. Check if n == 0
4. If yes, return 0 (base case)
5. Otherwise:
6. Find the last digit of the number
7. Add it to the result of the function called with the remaining number
8. Take an integer input from the user
9. Call the function using the input number
10. Store the result
11. Print the result
12. Stop the program
